

INCOM 2021
17th IFAC Symposium on
Information Control Problems in Manufacturing.

<http://www.incom2021.org/>

Open invited session - identification code: ipj56

**"Assembly 4.0": Smart, Collaborative, Responsive Assembly Processes & Systems
for Industry 4.0 Era**

Sponsored by: IFAC TC 5.1 - Manufacturing Plant Control

Abstract

Assembly systems are in perfect position to utilize the confluence of technological and theoretical advances in several domains. Some relevant examples of domains and advances are: (1) *Modeling domain*, advances in: digital twins, blockchain, and CAD assembly animations. (2) *Information Systems (IS) domain*, advances in: IoT, and cloud computing (CC). (3) *Worker assistance domain*, advances in: cobots, exoskeletons, and equipment reconfiguration. (4) *Computer vision domain*, advances in: augmented reality, gesture/posture recognition, remote measurement, and object tracking, (5) *Artificial intelligence domain*, advances in: machine learning, neural networks, expert systems, and speech recognition (6) *Parts supply domain*, advances in: additive manufacturing, kitting techniques, and autonomous dispatching (and navigating).

The ongoing and incoming developments in technology are radical, and are prone to improve assembly productivity and cost efficiency. Consequently, assembly systems will change the way they operate, and increase their product variety. A new generation of smart advanced and robust assembly processes and systems are in various degrees of development and are an important part of the smart manufacturing systems known as Industry 4.0 (the fourth industrial revolution). Therefore, these smart, collaborative, responsive assembly processes and systems are dubbed "Assembly 4.0". The challenge is how to develop models that best utilize recent technological and theoretical improvements. These developments necessitate the development of proper optimization models, control algorithms, automation technologies and management methods, to allow the aforementioned smart cyber physical systems of self-optimization, self-configuration, self-diagnosis and intelligent support to workers in their increasingly complex tasks. The implementation of Industry 4.0 principles to assembly processes defines "Assembly System 4.0", and requires the development of proper models, techniques and algorithms. These models, techniques, and algorithms, would allow to better employ the "smart assembly stations" and "smart part logistics" and take full advantage of the virtual copy of the physical assembly process to enable quick and decentralized decisions. Thus, better models will lead to significant improvement of flexibility and speed of the whole assembly system that enables more customized products, an efficient and scalable production, and a high variance in production control.

This open invited session seeks original manuscripts to investigate the design and management of "Assembly 4.0" processes and systems exploiting advanced technologies, mathematical models and methods, automation, management techniques and approaches as well as industrial case studies.

Possible topics of this Open invited track include but are not limited to:

- Collaborative assembly and cobots (collaborative robots)
- Assembly as a service
- Additive manufacturing for assembly
- Smart assembly work-station design and management, including:
 - equipment reconfiguration, human interaction, advanced ergonomics,
- Smart assembly-line design and load balancing
- Smart part logistics design and management – including the use of block-chain.
- Self-optimization models for assembly systems, including innovative assembly line balancing and sequencing models (including equipment reconfiguration).
- Self-awareness, self-diagnosis, self-configuration and self-healing methods.
- Intelligent support systems to assist workers in their increasingly complex tasks.
- Innovative automation and robotic technologies to enhance the human-robot co-working.
- Virtualization and simulation techniques for decision making in the assembly process environment.
- Novel industrial and real world case studies to test and spread the adoption of “Assembly system 4.0”.
- Implementing new technologies in the assembly line (e.g., augmented reality, smart sensors, internet of things (IoT), artificial intelligence (AI), smart robotics, cloud computing (CC), etc.)

Time schedule

31 October 2020	INCOM 2021-draft papers submission deadline
15 December 2020	Notification of acceptance
1 February 2021	Camera ready paper submission
8 February 2021	Early registration deadline
1 April 2021	Regular registration deadline
7-9 June 2021	INCOM 2021: 17 th IFAC Symposium on Information Control Problems in Manufacturing - INCOM

Manuscript Preparation

For Manuscript Preparation please look at <http://www.ifac.papercept.net/conferences/support/support.php>

For Manuscript submission please look at <https://ifac.papercept.net/conferences/scripts/start.pl>

Upon submission, make sure to use the **Invited session identification code: [_ipj56_](#)**

IMPORTANT: See additional submission details in the next page.

For any further information, please contact the Open invited track Technical Committee

Sponsored by: IFAC TC 5.1 - Manufacturing Plant Control

Initial Submission Details:

Paper writing & preparations:

The formal deadline for paper submission is: [September 30, 2020](#) (may be extended)

Prepare your paper using the Author guide: <https://www.ifac-control.org/events/author-guide>

Further paper writing support: <http://www.ifac.papercept.net/conferences/support/support.php>

WORD template and sample package: <http://www.ifac-control.org/events/information-for-ifac-authors>

Once your paper is ready for submission:

1. Go to: <http://ifac.papercept.net/conferences/scripts/start.pl>
2. **Log-in** with your IFAC Personal Identification Number (PIN) – (new members can create one).
3. Scroll your screen to "**Access a workspace**" and **activate the link:**
"Open the Home page in a new window" as shown here:

Warnings

Session time out. After 60 minutes of inactivity your session is terminated for reasons of security and you will need to log in again. Any work that you did not save or submit will be lost. Watch the small gray rectangle near the top right corner of most pages to see in how many minutes the session will expire. You may use the Refresh link available on most pages or any other suitable link or button to prevent the session from expiring. Do not use the Reload button of your browser to this end or at any other time because this may result in duplicate database entries or other unexpected effects

Do not use the browser Back button. Avoid using the Back button and other navigational tools of your browser to navigate this site. If you do then you may lose the connection and also data. Use the links provided on every page to navigate the site

Allow each page to load completely. Clicking on a link or button before the page has been fully loaded may result in an error message requiring you to log in all over again

[Check here](#) if you do not see the links to some of your papers

Access a workspace

To submit a new contribution to an active conference hosted by this site return to the Home page and look for the link "Submit a contribution to..." next to the conference of your choice. [Open the Home page in a new window or tab](#)

[Automatica](#) [Enter](#) Automatica, the IFAC Journal access page (in a new window or tab)

4. In the new screen - Scroll down to :

IFAC INCOM 2021
17th IFAC Symposium on Information Control Problems in Manufacturing
June 7-9, 2021, Budapest, Hungary

- [Submit a contribution to INCOM 2021](#)
- [Contact the INCOM 2021 organizers](#)
- [Log in](#)

Last updated June 18, 2020. The deadline for Special/Invited Session/Open Tracks proposal is 30th September 2020
The deadline for manuscript submission is 31st October 2020

5. Activate the link "Submit a contribution to INCOM 2021"

6. The upper part of your screen looks like this:
